

Bluetooth Device Setup:

Star SM-T300i wireless printer:

1. Open Box
2. Plug in charging cable to printer
3. Open printer paper compartment.
4. Unroll paper and close compartment with a bit of it sticking out
5. Printer should be charged enough to turn on, turn it on.
6. Once on, hold both buttons until screen says setup mode
7. Press power button until in Bluetooth Mode. (make sure its just bluetooth mode, not bluetooth(iAP))
8. Turn printer off and then back on. As soon as it turns on hold both buttons until it prints out a long receipt with lots of characters and 2 QR codes at the bottom.
9. Above the bottom QR code find BD Addr: 00-15-__-__-__-__, this is the MAC address
10. Create label of the MAC addr with Epson label printer: *P(Mac Addr no dashes)
11. Scan label to pair printer to a viewsonic or phone, try and print something
12. If printer works you're done!
13. If not make sure MAC address is correct, that you're in Bluetooth Mode (not iOS mode), that the scanner you're using is paired to the correct device. Once you figured out the problem attach correct MAC address label to printer.

Socket 8Ci Mobile Scanner:

1. Turn scanner on and scan the SPP barcode located on page 17 of the manual or #4 of this list.
2. Make sure to scan the Enable Code 93 barcode if you are working with older compassmax barcodes. See #5.
3. Pair the scanner to a viewsonic and scan every type of barcode you will be working with to make sure the scanner is properly configured.
4. SPP barcode:

5. Code 93 barcode:
